## **AMENDMENTS TO THE CLAIMS**

1. (Currently Amended) A method, comprising:

inserting a <u>live broadcast-related trigger</u> code into a <u>live</u> broadcast program <u>while</u>

the live broadcast program is being broadcast, the <u>trigger</u> code

corresponding to web content, the web content relating to content of the

broadcast program, the <u>trigger</u> code including one or more of audio tone

sequences and video motion sequences specific to the live broadcast

program;

broadcasting the broadcast program;

detecting the <u>trigger</u> code while the <u>live</u> broadcast program is being broadcast;

automatically displaying a website having the web content upon detection of the <a href="trigger">trigger</a> code, wherein the website is displayed simultaneously while the <a href="live">live</a> broadcast program is being broadcast.

- 2. (Currently Amended) The method of claim 1, wherein the inserting of the <u>trigger</u> code into the broadcast program comprises inserting the <u>trigger</u> code into content of the <u>live</u> broadcast program, the <u>trigger</u> code is based on a predetermined criteria <u>specific</u> to the live broadcast program.
- (Currently Amended) The method of claim 1, wherein the <u>trigger</u> code comprises
  an audio trigger, wherein the <u>audio trigger comprises</u> having the <u>audio tone</u>
  sequences.

- 4. (Currently Amended) The method of claim 1, wherein the <u>trigger</u> code comprises a video trigger, wherein the <u>video trigger comprises having</u> the audio tone sequences and <u>the video motion sequences</u>.
- 5. (Currently Amended) A method, comprising:

providing web content relating to a <u>live</u> broadcast program <u>while the live</u>

<u>broadcast program is being broadcast;</u>

providing a trigger event for a web device in the form of

a <u>live broadcast-related trigger</u> code associated with the web content, wherein the <u>trigger</u> code is inserted into the <u>live</u> broadcast program, the <u>trigger</u> code corresponding to the web content, the web content relating to content of the <u>live</u> broadcast program, the <u>trigger</u> code including one or <u>more of audio tone sequences and video motion sequences specific to the live broadcast program; and</u>

- causing the web device, located sufficiently close to a receiving device to detect

  the <u>trigger</u> code when emitted by the receiving device while the <u>live</u>

  broadcast program is being broadcast, to automatically retrieve and

  present the web content simultaneously with the presentation of the <u>live</u>

  broadcast program by the receiving device by displaying a website having the web content.
- 6. (Original) The method of claim 5, wherein the web device comprises a web tablet.
- 7. (Original) The method of claim 5, wherein the web device comprises a computer system.
- 8. (Original) The method of claim 5, wherein the receiving device comprises a television.

Docket No: 42390P11767 Application No.: 09/966,279 9. (Currently Amended) A method, comprising:

broadcast program, for a trigger in the form of a <u>live broadcast-related</u>

<u>trigger</u> code that is inserted into the <u>live broadcast program</u>, the <u>trigger</u>

code corresponding to web content, the web content relating to content of

the <u>live broadcast program</u>, the trigger code including one or more of

<u>audio tone sequences and video motion sequences specific to the live broadcast program</u>;

detecting the <u>trigger</u> code while the <u>live</u> broadcast program is being broadcast; in response to detecting the <u>trigger</u> code, determining a uniform resource locator (URL) of a website having web content associated with the <u>trigger</u> code in the live broadcast program; and

- synchronizing the web content to the <u>live</u> broadcast program without the need for user action by automatically retrieving and presenting the web content simultaneously while the <u>live</u> broadcast program is being broadcast by displaying a website having the web content.
- 10. (Previously Presented) The method of claim 9, wherein the presenting of the web content comprises diversified presentation of the web content based on a predetermined criteria comprising time-based diversification and location-based diversification.
- 11. (Original) The method of claim 9, further comprising terminating the presentation of the web content based on the predetermined criteria.

Docket No: 42390P11767 Application No.: 09/966,279

- 12. (Currently Amended) A device interaction-system, comprising:

  an insertion module to insert a <u>live broadcast-related trigger</u> code into a <u>live</u>

  broadcast program while the live broadcast program is being broadcast,

  the <u>trigger</u> code corresponding to web content, the web content relating to

  content of the <u>live</u> broadcast program, the trigger code including one or

  more of audio tone sequences and video motion sequences specific to the

  <u>live</u> broadcast program;
  - a broadcasting station to broadcast the live broadcast program;
  - a receiver to detect the <u>trigger</u> code while the <u>live</u> broadcast program is being broadcast; and
  - a web device to automatically display a website having the web content upon detection of the <u>trigger</u> code, wherein the website is displayed simultaneously while the <u>live</u> broadcast program is being broadcast.
- 13. (Cancelled)
- 14. (Currently Amended) The device interaction system of claim 12, wherein the broadcasting station comprises one or more of the following: a television network, a radio network, a cable provider/operator, a local broadcaster, a satellite system provider, and a content recorder.
- 15. (Currently Amended) The device interaction system of claim 12, wherein the receiver is further to receive the <u>live</u> broadcast program having the <u>trigger</u> code.
- 16. (Currently Amended) The device interaction system of claim 12, wherein the receiver comprises one or more of the following: a set top box, a satellite dish, a television, a radio, a computer, a CD-Compact Disk (CD) player, a cassette player, and a DVD-Digital Video Disk (DVD) player.

Docket No: 42390P11767 Application No.: 09/966,279 Claims 17-22 (Cancelled)

23. (Currently Amended) A-An article of manufacture comprising a machine-readable

medium having stored thereon data representing sequences of instructions, the

sequences of instructions which, which when executed, by a processor, cause the

processor a machine to:

insert a live broadcast-related trigger code into a live broadcast program while the

live broadcast program is being broadcast, the trigger code corresponding

to web content, the web content relating to content of the live broadcast

program, the trigger code including one or more of audio tone sequences

and video motion sequences specific to the live broadcast program;

broadcast the broadcast program;

detect the trigger code while the live broadcast program is being broadcast; and

automatically display a website having the web content upon detection of the

trigger code, wherein the website is displayed simultaneously while the

live broadcast program is being broadcast.

24. (Currently Amended) The machine-readable medium article of manufacture of

claim 23, wherein the trigger code comprises an audio trigger, wherein the audio

trigger comprises having the audio tone sequences.

25. (Currently Amended) The machine-readable medium-article of manufacture of

claim 23, wherein the code comprises a video trigger, wherein the video trigger

comprises having the audio tone sequences and the video motion sequences.

Claims 26-30 (Cancelled)
